

Profelt™ Puck

The Safer FUNctional Floor Hockey Puck

To the game of floor hockey comes the puck for floor hockey. **Safer**, simple and **functional** the Profelt™ Puck is to floor hockey what the rubber puck is to ice hockey - without many of the dangers attributed to flying rubber.

The Profelt™ Puck glides well and can be shot quickly with accuracy. It handles predictably minimizing bounce and roll. This performance is achieved without compromising safety.

Design and material make the Profelt™ Puck safer, yet effective, keeping the level of fun high.

The remarkable Profelt™ Puck consists of a disc of felt sewn just inside its periphery. Felt is produced using mechanical action to interlock wool fibers. The Profelt™ Puck is, in essence, compressed wool, a natural product.

The result is a durable non-marking, smooth-sliding disc, which retains its shape without fraying, "game in and game out".

Sewing helps the Profelt™ Puck keep its shape while causing the edge to curve slightly, minimizing bounce and roll thereby maximizing control.

Floor hockey players from novice to expert now have available to them a puck, which allows them to perform with less control problems and bruises associated with other pucks.

You can choose between the Original Profelt™ Puck, the Performance

Profelt™ Puck or Custom Profelt™ Pucks.

The Original Profelt™ Puck can be used with any hockey stick. It lends itself well to the slower game of the novice or the high-speed game of the advanced hockey player.

The heavier, higher density Performance Profelt™ Puck works well with heavier sticks. It is recommended for adult floor hockey.

If you need a Custom Profelt™ Puck, leather covered, weighted etc, contact us for a quote.

Profelt™ Pucks
(Patent # 1 315 818)
